

Energy & Carbon

Monitor & report performance against established standards, plan and deliver reduction initiatives

For today's organisation, energy & carbon management is not just about knowing where you are now, but forecasting and planning for the future. You need to collect accurate data across multiple facilities, and have the tools to run a variety of future scenarios. By understanding your footprint, you can take steps to manage and reduce it, cutting both costs and emissions.

Our Solution

Our Energy and Carbon solution helps you gather data from across your business, calculate your emissions across scopes 1, 2 and 3 using established protocols and GHG conversion factors and create performance reports and dashboards. Leading companies, including Barclays and Swiss Re use our system to manage and report their energy and carbon.

Key features and benefits

- Flexible tools that help you work out your major impact areas and track your impacts across energy and travel
- Flexible estimations methodologies for when you can't get all your data
- Real time meter reading and management for when you can
- Import files or feeds from existing enterprise reporting platforms
- In-built carbon factor management across global carbon factor sets
- Planning and reporting on reduction initiatives

Certified

by the Carbon Disclosure Project as a Carbon Calculation Partner

"CDP is delighted to be working with CRedit360 as a Carbon Disclosure Partner. The software has undergone testing by a third party to ensure it meets our criteria for performance and we are pleased to recommend this tool in the calculation of carbon emissions."

Paul Dickinson
CEO of the Carbon Disclosure Project

CARBON DISCLOSURE PROJECT
ACCREDITED PROVIDER

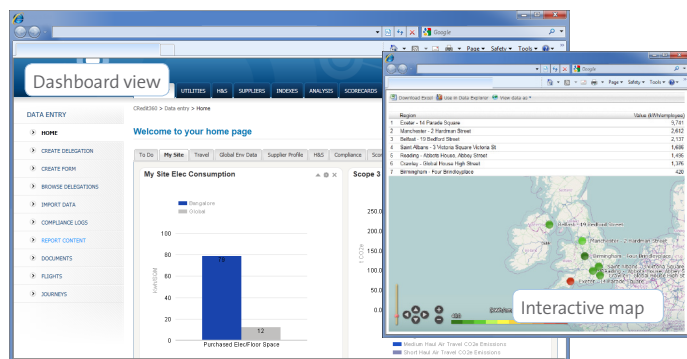

credit360 is a web based sustainability data management solution which provides your users with quick and intuitive access to a central system wherever they are in the business. Energy & Carbon is just one aspect of the credit360 system. Our clients can incrementally build a single system to manage all of their sustainability issues in a single integrated platform, from Energy & Carbon to Environment, Health & Safety.

A closer look at Energy & Carbon

How do I collect the information?

- Integrate with existing systems or even pull data straight from your energy suppliers, streamlining & automating data collection wherever possible.
- Delegate online forms and collect data with approval steps
- Import data from MS Excel
- A full audit trail is kept in the system which makes third party assurance more robust and less complicated.

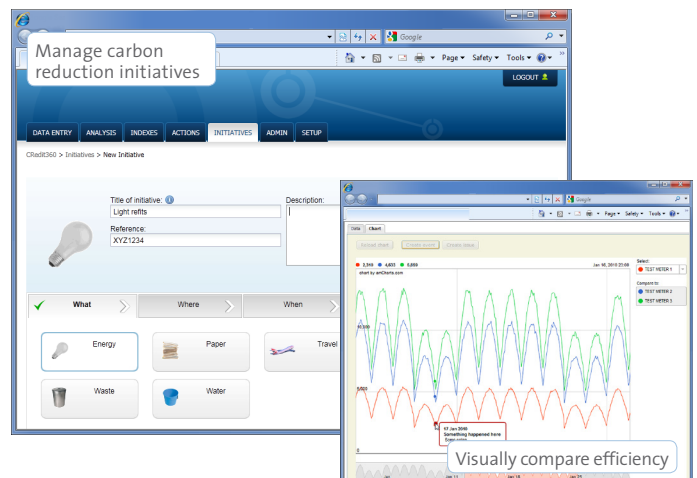

What reporting & management tools will I get?

- Use flexible tools to create carbon performance reports for any level of your business
- Browse data with interactive maps
- Monitor real-time meter level energy use complete with automated alerts
- Create dashboards to provide intuitive visual overviews of performance and even track this against defined targets
- Export reports to MS Excel, Word, PDF or even as live updates to your intranet or external websites

What's next? How do I manage carbon reductions?

- Plan and project manage carbon reduction initiatives. Compare efficacy and return on investment, and visualise projected impacts.
- Run and compare scenarios to understand the impact of a number of changing variables on your future carbon footprint e.g. a 20% increase in your European workforce combined with the outsourcing of your data centres.

How do we handle carbon calculations?

We manage a database of global carbon conversion factors which we keep updated for you. Where appropriate, factors are provided not just for CO₂e but also discrete gases such as CH₄ and N₂O. You can use these, or override with alternatives that fit your exact needs. We are Carbon Disclosure Project Accredited to the Gold Standard. This means we have been independently tested for creating and maintaining your carbon calculations so you can meet a whole range of standards, including GHG Protocol, CDP, GRI, NGRS, DECC, CRC EES, ISO14064.
